

Our Capabilities

High-Speed Forging | Brave, PA

At our High-Speed Forging Division, we produce an array of forged brass components from rod stock to near-net product in less than half a second per part. Many machined small brass parts are good candidates for the high-speed forging process.

Precision Machining | Frankfort, IL

With a standard turning capacity of up to 2 5/8" round (larger sizes available), our machining team specializes in producing many different brass alloys including standard free machining brass, Red Brass, lead-free brass, dezincification resistant brass (DZR) and others.

Copper Components

Expert copper preparation for a multitude of copper stub out shapes and sizes. Specialized components that include solder/brazed copper and brass assemblies.

Specialty Services

Assembly & Kitting ▪ Special Packaging ▪ Private Labeling
